

# RESEARCH ETHICS

## Disclaimer Form

The following declaration should be made in cases where the researcher and the supervisor (where applicable) conclude that it is not necessary to apply for ethical approval for a specific research project.

### PART A: TO BE COMPLETED BY THE RESEARCHER

|                     |             |
|---------------------|-------------|
| Name of Researcher: | Hallam Rear |
| School:             | DTIB        |

| Student/Course Details (If Applicable)                                      |  |               |                               |
|-----------------------------------------------------------------------------|--|---------------|-------------------------------|
| Student ID Number:                                                          |  | 17017093      |                               |
| Name of Supervisor(s)/Module Tutor:                                         |  | David White   |                               |
| PhD/MPhil project: <input type="checkbox"/>                                 |  |               |                               |
| Taught Postgraduate Project/Assignment: <input checked="" type="checkbox"/> |  | Award Title:  | MSc Games Computing           |
| Undergraduate Project/Assignment: <input type="checkbox"/>                  |  | Module Title: | GDEV70007 Game Master Project |

|                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                |          |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|----------|
| Project Title:                                                       | Complex Collision Detection Techniques                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                |          |
| Project Outline:                                                     | The project will initially clarify the terms within the title by directly answering the questions "What is collision detection?" and "What defines complex collision detection?". It will then build upon this by demonstrating research into existing collision detection algorithms, providing examples of their usage in modern applications. The project will then go on to a discussion surrounding an implementation of a complex collision detection algorithm before discussing the latest additions to the field. It will also discuss optimisation techniques specifically regarding the application of the collision detection algorithms to games. |                |          |
| Give a brief description of research procedure (methods, tests etc.) | A number of collision detection techniques will be identified, their differences and use cases discussed as well as the efficiency of their applications. This will be done through the reading of peer-review research papers, analysis of the source code of created solutions and their documentation (both open-source and commercial) as well as reviewing talks and conference videos regarding the subject. There will be no human or animal participants involved in research gathering.                                                                                                                                                               |                |          |
| Expected Start Date:                                                 | 23/03/2026                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Expected Date: | 21/08/26 |

### Declaration

I/We confirm that the University's Ethical Review Policy has been consulted and that all ethical issues and implications in relation to the above project have been considered. I/We confirm that ethical approval need not be sought. I/We confirm that:

|                                                                                                                   |                                     |
|-------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| The research does not involve human or animal participants                                                        | <input checked="" type="checkbox"/> |
| The research does not present an indirect risk to non-participants (human or animal).                             | <input checked="" type="checkbox"/> |
| The research does not raise ethical issues due to the potential social or environmental implications of the study | <input checked="" type="checkbox"/> |

|                                                                                                                                             |                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| The research does not re-use previously collected personal data which is sensitive in nature, or enables the identification of individuals. | <input checked="" type="checkbox"/>                                     |
| Has a risk assessment been completed for this project?                                                                                      | <input type="checkbox"/> Yes<br><input checked="" type="checkbox"/> N/A |

|                                                                                                                           |             |       |            |
|---------------------------------------------------------------------------------------------------------------------------|-------------|-------|------------|
| Signature of Researcher:                                                                                                  | HALLAM REAR | Date: | 23/03/2026 |
| Signature(s) of Project Supervisor(s) (if student) OR<br>Signature of Head of Department/<br>Senior Researcher (if staff) | David White | Date: | 23/03/2026 |
|                                                                                                                           |             |       |            |

**NB:** If the research departs from the protocol which provides the basis for this disclaimer then ethical review may be required and the applicant and supervisor (where applicable) should consider whether or not the disclaimer declaration remains appropriate. If it is no longer appropriate an application for ethical review **MUST** be submitted.
